Subject: Lynda Bennett / Madison Cawthorn Election Stats.

Election statistics are normally boring, but this is an attempt to make them fun and easy to understand. This analysis will examine the last two (2) elections of 3/3/2020 and 6/23/2020, and in specific, those votes between two (2) candidates - **Lynda Bennett** and Madison Cawthorn. Granted, during the primary election on 3/3/2020, voters were given the opportunity to select among a plethora of candidates. Only those votes for **Bennett** and Cawthorn will be examined.

Raw Numbers.

Election	Lynda Bennett	Madison Cawthorn	Total Votes
3/3	20,606	18,481	39,087
6/23	15,806	30,444	46,250

Lynda Bennett did not achieve a 30% of total votes cast, requiring the run-off election.

- 7,163 more people voted for these two candidates in the run-off election than did the primary.
- **Bennett** captured around 20% of the vote, while Cawthorn captured around 18% in the primary.
- Madison Cawthorn decisively whooped **Lynda Bennett** in the run-off, by a factor of 2:1.
- More people who voted for different candidates in the primary, switched their vote to Cawthorn in the run-off.

And the most interesting stat:

- 4,800 people who voted for **Lynda Bennett** in the primary, changed their minds and did not vote for her in the run-off.

WTF?

The obvious reason for this statistic was/is **Lynda Bennett's** behavior, believing she was entitled to replace Mark Meadow's as NC11 Congressional Representative. For the complete list of her behavior, be sure to visit www.haywoodtp.net and look now under Interesting Stuff Achieves.

Where does **Lynda Bennett** go from here? Off to join **Debbie King** in oblivion.
